Project Name	**Revolutionizing Agriculture with AgriEdge Or-Mange Ltd: A Salesforce-Driven Order Management Solution**
Maximum Marks	100 Marks

Problem–Solution Fit Template

Section	Details
Customer Segment	Small to medium farmers, agricultural suppliers, distributors, and internal order management staff in India.
Problem Statement	Farmers face difficulty managing orders, tracking deliveries, and keeping inventory accurate due to fragmented systems and low digital adoption. Suppliers struggle to fulfill orders efficiently. Administrators and support staff lack real-time visibility into orders and inventory, leading to delays and errors.
Current Alternatives	Manual order books, WhatsApp or phone calls, basic spreadsheets, or partially digitized systems. These are slow, error-prone, and lack integration.
Consequences / Pain Points	- Orders delayed or lost - Poor inventory management - Lack of visibility for suppliers and logistics - Limited analytics for decision-making - High operational overhead for customer support
Proposed Solution	**AgriEdge Or-Mange Ltd: Salesforce-Driven Order Management Solution** - Mobile & web apps for order placement and tracking - Salesforce-driven automated order processing and inventory updates - Integration with suppliers, logistics, and payment gateways - Notifications, dashboards, and analytics for management - Offline mode for low-connectivity regions

Key Features Solving the Problem	- Centralized order management - Real-time inventory and order tracking - Automated notifications and confirmations - Data-driven reporting and insights - Seamless supplier and logistics integration - Offline-first mobile app for rural farmers
Customer Benefits	- Faster, reliable order processing - Reduced errors and delays - Better visibility and planning for inventory and deliveries - Improved customer satisfaction and trust - Lower operational overhead for support staff
Evidence / Validation	- Interviews with farmers & suppliers reveal challenges in order tracking - Existing solutions fail in offline or low-connectivity scenarios - Pilot tests show faster order confirmation and fewer missed deliveries with AgriEdge
Unique Value Proposition (UVP)	"Seamless, Salesforce-powered agricultural order management that connects farmers, suppliers, and logistics in real-time—even offline."

Purpose:

- ❑ Solve complex problems in a way that fits the state of your customers.
- ❑ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ❑ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ❑ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ❑ **Understand the existing situation in order to improve it for your target group.**

Define CS, fit into CC

1. CUSTOMER SEGMENT(S) — CS

Who is your customer?
i.e. working parents of 0-5 y.o. kids

6. CUSTOMER CONSTRAINTS — CC

What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.

5. AVAILABLE SOLUTIONS — AS

Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking

Explore AS, differentiate

Focus on J&P, tap into BE, understand RC

2. JOBS-TO-BE-DONE / PROBLEMS — J&P

Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.

9. PROBLEM ROOT CAUSE — RC

What is the real reason that this problem exists?
What is the back story behind the need to do this job?
i.e. customers have to do it because of the change in regulations.

7. BEHAVIOUR — BE

What does your customer do to address the problem and get the job done?
i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)

Focus on J&P, tap into BE, understand RC

Identify strong TR & EM

3. TRIGGERS — TR

What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.

4. EMOTIONS: BEFORE / AFTER — EM

How do customers feel when they face a problem or a job and afterwards?
i.e. lost, insecure > confident, in control - use it in your communication strategy & design.

10. YOUR SOLUTION — SL

If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality.
If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.

8. CHANNELS of BEHAVIOUR — CH

8.1 ONLINE
What kind of actions do customers take online? Extract online channels from #7

8.2 OFFLINE
What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.

Extract online & offline CH of BE
